

**INTRA+**

## *Key information at your fingertips!*

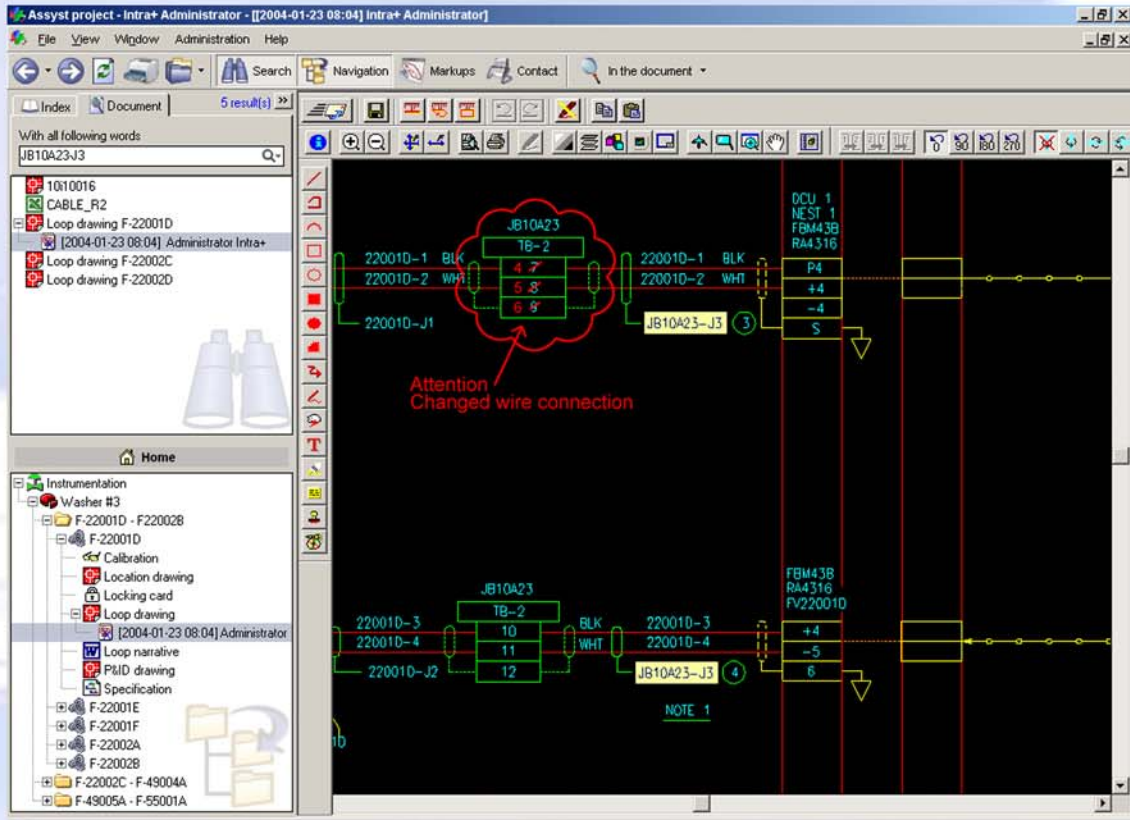

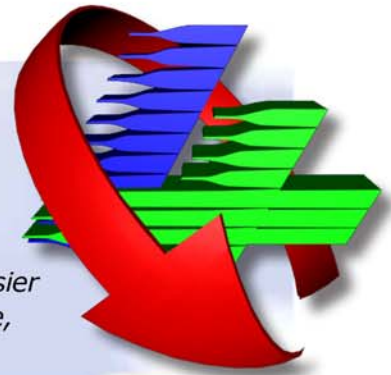

- *In one single search, find instantly:*
  - *the information in all your various systems at once.*
  - *and all other related information to the specific issue.*
- *Access information easily throughout the plant and from anywhere in the world.*
- *Search and visualize your documents from a single window.*
- *Distribute your updated documents such as ISO, forms, procedures, drawings, etc.*
- *Reduce time loss to lack of access to key information.*
- *Allow access to your expertise 24 hours a day.*
- *Turn thousands of lost hours annually into profits.*
- *Instant access = productivity gain.*

- Do you handle an important volume of information from different sources, formats, and require personnel to support such a volume?
  - Are your employees able to instantly retrieve the information they are looking for from thousands of plant documents, 24 hours a day, 365 days a year?
- INTRA+ is a solution that provides safe, instant access to your vital information and therefore allows you to increase personnel productivity, decrease production downtime and increase profits.*

**INTRA+** is designed for people involved in plant maintenance and production such as executives, engineers, technicians, operators and administrators.

By accessing the information through **INTRA+**, you will notice a remarkable increase in employee productivity because deployment of information will be easier and more efficient, thus allowing you to recapture thousand of hours in lost time, year after year.

**INTRA+** is a custom client/server WEB system that provides your personnel with instant access to all documents 24 hours a day, 7 days a week.

**INTRA+** allows the automatic building of virtual links to all your documents, based on logical structures, and their distribution to your personnel. Your source documents are neither moved nor modified, and are rapidly accessible without the source writing software.

**INTRA+** provides a powerful search engine which allows the user to find information instantly, directly by the words contained in all documents.

The example above is the result of a search performed by a technician on a cable number. **INTRA+** immediately finds all the documents containing this number. The technician selects the connection drawing. **INTRA+** displays the drawing and its annotation, and indicates to which sector it belongs. The technician then zooms in on the wanted portion, prints the drawing and completes his service call. All this is accomplished in a few seconds.

**Key information at your fingertips!**

# Key features

## Search

- Full-text indexing in all type of documents
- Search in databases
- Search by pattern
- Search by sector or specific location
- Advanced search with filtering options
- Search by date, keywords, title, location, etc...

## Documents

- ISO documents, internet link ...
- Procedures and operations manual, maintenance, suppliers.
- Forms (ex.: Locking, operations, reports ...)
- Description of loop narratives, specifications, calibrating ...
- Technical drawings (P&ID, electrical, mechanical, structure, 3D)
- Databases (AS400, document manager, SQL, ACCESS ...)
- Equipment list, materials, problems ...
- Configuration of DCS, PLC, HMI ...

## Structure

- Groups multiple information sources
- Common tree, with access security
- Trees for individual users
- File viewing window
- Easy integration of different type of documents
- Creation of a simple logical filing structure
- Different type of annotations
- Visualization of all type of documents

## Security

- Automatic integration based on your current plant security system
- Access profile management
- User management
- Read/write access control

## Automation

- Automated document integration mechanism
- Automated diagnostics of document structure
- Virtual disk image, with automatic update
- The application can be adapted to a company's specific needs.

## Language

- Multilingual
- Automatically converts from one language to the other, whatever the workstation

# Benefits

- Instant results
- Easy to use
- Automatically monitors and indexes in real-time any new, deleted or updated documents.
- Access 24/7

- Access over 300 different formats and databases
- Source software can be opened directly
- No need to modify or move your existing source documents
- Supports hundreds of thousands of documents
- Document annotation and databases

- Can be adapted to the various sectors of a plant
- No reorganization needed
- Intuitive interfaces
- Multiple tree structure
- Training takes only a few minutes
- Installation takes only a few days

- Seamless to existing security
- Additional security provided per user profile

- Document updates are totally automated
- Possibility of displaying the last version only
- Supports and improve document management (DM) solution's efficiency

- Multi-site integration
